

CAMBION®

Electro-mechanical & Inductive Components

www.cambion.com

Introduction

HQ Singapore

Cambion® - The story so far

The *Cambridge Thermionic Corporation* was founded in the 1930's in Cambridge, Massachusetts USA. The name Cambion® being derived from the first four and last three letters of that name.

The company quickly established a reputation in the USA as a quality supplier of small electro-mechanical and electronic components for the military and professional electronics markets.

In 1961 a parallel manufacturing facility was established in Castleton, Derbyshire, England to service an ever-expanding global market.

Over the company's history, ownership changes have given rise to various name iterations such as Midland Ross, IPI Limited, Hollingsworth and Wearnes.

In 2015, the Singaporean multi-national, United Engineers Limited acquired the organisation to support its growth in Technology and Manufacturing. United Engineers Limited established in 1912 is one of Singapore's pioneer companies and is recognised as the 11th oldest by The Singapore International Chamber of Commerce.

Cambion® - world-class manufacturing

Cambion Electronics Limited has a long established pedigree as a designer and manufacturer of high performance electro-mechanical components, inductive assemblies and inter-connective solutions serving the military, aerospace, instrumentation, transport and industrial markets. Cambion

Electronics Limited is committed to ongoing product development; products are constantly reviewed and updated for strategic fit to meet the ever changing marketplace. Cambion Electronics Limited is autonomous in its manufacturing capabilities with stamping, machining, moulding, automatic assembly and a fully equipped toolroom all under one roof at its

Castleton facility, consequently having total control over factors of production, so able to swiftly take ideas off the drawing board to reality in double quick time. Continual investment in the latest machinery and systems, has substantially enhanced manufacturing and assembly capabilities to cover a broad and comprehensive range of disciplines and technologies. Cambion Electronics Limited is fully ISO9001:2015 and ISO14001:2015 accredited, in addition, it has been awarded several service and system distinctions from its blue chip customer base.

Call our dedicated order line on **+44 (0) 1433 621555** or visit **www.cambion.com**

Our Business

Cambion® - your bridge to the Far East

Cambion Electronics Limited works closely with its associated group facilities in the Far East. Group facilities are dedicated to providing OEM, ODM and EMS services for industry. Products and services include: inductive components, electronic connectors and assemblies, miniature switches, anti-theft devices sensors, PCBA, full box build and many more. With a dedicated precision moulding and stamping capability along with R & D centre, gives the capability of supporting small to large projects. The Group also has a leading precision

engineering provider of high-volume, integrated, one-stop aluminium die-casted and precision parts with value-add engineering, tool design, high quality assurance standards working to best practices, active in all market sectors, particularly strong in automotive. Facilities have a combination of the following accreditations: IATF 16969, AS9100 ISO14001:2015, BS OHSAS 18001.

Timeline...

1961	Cambion Electronic Products Limited established in the UK
1981	Cambion. SAE and Hollingsworth acquired by Midland Ross (MR).
1984	Name changed to Midland Ross Limited (MR).
1987	Management buy-out of the MR connector division to form IPI.
1987	Name changed to Interconnection Products Limited. Cage Code U2600
1991	The US part of IPI ceased trading. Cage Code 71279
1991	Acquired by the Wearnes Organisation.
1994	Name changed to Wearnes Hollingsworth Limited. Cage Code U4251
2001	Name changed to Wearnes Cambion Limited. Cage Code K3105
2015	United Engineers Limited acquires the Wearnes corporation
2016	Name changed to Cambion Electronics Limited. Cage Code K3105

Our vision helps us focus

VISION

To be a world-class organisation which embraces innovation, exceptional business practices and values in our chosen businesses.

MISSION

To enhance stakeholder values by:

- being a preferred employer and empowering our staff to excel
- ensuring the best customer satisfaction
- delivering sustainable returns to shareholders
- fulfilling our role as a good corporate citizen

VALUES

UPHOLDING INTEGRITY

FOSTERING TEAMWORK

CHAMPIONING INNOVATION

ENSURING EXCELLENCE

PART NUMBER STRUCTURE

All information contained herein, including photographs, drawings, specifications and dimensions is believed to be accurate as of the date of publication but is subject to change without notice. Cambion Electronics Ltd makes no claims or warranties as to the use of the products contained in this publication. The suitability or fitness for any application is the responsibility of the user.

Dimensions

Dimensions in this catalogue are given firstly in inches with metric equivalents in millimetres in brackets. For example: - .040 (1,02).

Part Numbering System

All standard Cambion part numbers consist of 13 digits as shown here. Always quote the full Cambion part number when ordering. A full explanation of individual part numbers appears on the individual product pages of this catalogue.

See below for details of stock class, dimensional variable, plating and colour codes

Cambion Stock Class Codes

120 Solder terminal pin type	435 Tooling	555 Common mode choke shielded
140 Solder terminal slotted	445 Patch cords	556 Variable coils unshielded
160 Solder terminal - turret	450 Single pole sockets	558 Variable coils shielded
180 Solder terminal - eyelet	460 Connector pins	560 Filter terminal
200 Terminal boards	461 Connector plugs	570 Insulated terminals
352 Insulated standoffs	506 Insulators	571 Insulated terminals
360 Plug components	550 Chokes moulded	572 Insulated terminals
400 Battery holders	551 Chokes moulded	702 Socket adapter boards
410 Component clips	553 Chokes encapsulated	703 Relay bases
415 Card ejectors	555 Inductors	

Basic Part No - This group of four digits gives the specific part number allocated to the product.

Dimensional Variable - This group of two digits is used where a choice of a particular dimension is available. This is normally used where a pin, cage jack or solder terminal is offered with a variety of shank lengths to suit different board thickness (for example see 460-2970). This portion of the part number may also be used to indicate a choice of dimensions between pin centres of a shorting link (see 461-2871) or the length of a patch cord (see 445-3306). In the case of inductors or chokes this would determine the inductance value of the part (see 550-3399). Where only one option is available -01 is always used (see 450-3704).

Plating Finish - This group of two digits is used to define the plating of the product. You should refer to the catalogue page for actual plating specifications but in general the following codes are used.

Plating Code	Plating	Plating Code	Plating
-00	No plating	-06	Gold/tin
-01	Silver	-07	Cadmium
-02	Nickel	-08	Bright alloy (obsolete specification)
-03	Gold	-09	Hot solder dip (obsolete specification)
-04	Electro-tin	-10	Hot tin dip (obsolete specification)
-05	Electro Solder		

Note also that in the case of standard chokes, these two digits indicate inductance tolerance

Dash Number	Tolerance
01	± 5%
02	±10%
03	±20%

Colour Code - The final group of two digits indicates the colour of the product. It is used where some portion of the product, normally an insulator, is made of a plastic material. See 450-4352 as an example.

Dash Number	Colour	Dash Number	Colour
-00	No colour	-15	Green
-10	Black	-16	Blue
-11	Brown	-17	Violet
-12	Red	-18	Grey
-13	Orange	-19	White
-14	Yellow	-20	Natural

Current Rating and Current Carrying Capacity

When an electric current passes through a connector interface, resistance heat is generated. The first passage of current across a newly mated connector where there is a defined interface resistance causes a minute local temperature rise and extremely small metal-to-metal “welds” to take place across the interface; this phenomenon is expected and results in an uninterrupted metal path across the interlace. As the current increases, the size of these minute welds increases up to a point, but in Single Pole Sockets and other separate connectors, they are still small enough to break apart on separation without visible impairment of the plating. As the current is increased more, further heating takes place not just in the plated films but in the pin and spring metal themselves. The heating, if significant and of long duration, can cause metallurgical deterioration of the finishes. This usually manifests itself by darkening of the luster of the finishes and is explained by migration of the metal atoms between plating and subplating and chemical activity with oxygen and certain air pollutants through ever present minute pores in the exterior plating.

It is sufficient to say that connector reliability can be jeopardized by long-term excessive current.

Cooling the connector takes place in two ways: by conducting the heat away via the electrical conductors and by conducting heat to the connector and conductor surfaces where circulating air carries it away by convection. The rate of cooling is affected by the size of the housing and conductors and by how much air circulates around the connector. In conducting the current rating tests, a drawn cup jack was used since it is low in mass and heats up more than any machined body jack with a given current.

The current rating is determined at CAMBION by first matching the pin size to the conductor size as follows:

Up to .025 (0,64)	dia. 24 AWG
.030 (0,76)	20 AWG
.040(1,02)	20 AWG
.050(1,27)	16 AWG
.062(1,57)	16 AWG
.080(2,03)	12 AWG
.094(2,39)	12 AWG

Current Rating is defined as the current which produces one degree Centigrade increase in temperature under these conditions. Contact Resistance is measured at this current.

Maximum Current Carrying Capacity is defined as that current which produces a temperature rise of 30°C when the test is continued above the current rating.

These measurements are made with the Single Pole Socket soldered to insulated wires rather than mounted in printed circuit boards. In this way, variables of the mounting board heat dissipation are eliminated.

SINGLE POLE SOCKETS PERFORMANCE DATA

Cambion miniature pins and sockets are specifically designed for quick, tight, space-saving applications on printed circuits. All connectors are electrically and mechanically tested, carefully inspected for dimensional accuracy and, when necessary, subjected to severe environmental tests. Cambion pins and sockets are available from stock in a wide range of sizes, materials and finishes to meet virtually every requirement.

Sockets are closed entry cage type. The loose piece socket consists of two pieces - a flexible spring and a housing. The spring formed from beryllium copper is hardened and then plated. Housings may be drawn copper cups or machined from brass depending on application. The spring is securely captivated in the housing by staking. Most loose piece socket connectors are offered with three plating finishes - gold spring and housing, gold spring and electro tin housing or electro-tin spring and housing. Loose piece sockets are available in many styles and sizes to accommodate miniature pins and wires in the range .014 (0,36) to .093 (2,36) diameter. For repeated usage, Cambion recommends that pins to mate with loose piece sockets should be within $\pm .002$ (0,05) of nominal cage diameter.

CONTACT CONFIGURATIONS

SINGLE POLE SOCKET DESIGN FEATURES

Compound curvature spring

- Longitudinal and circumferential contact.
- Stamped, burr-free heat-treated beryllium copper spring/conductor.

3-point contact

- 60% contact around mating pin.

Pins are precision engineered to be compatible with loose piece sockets and thereby provide positive and lasting electrical connections with low contact resistance. They are offered only gold plated, and pin diameters are held to $\pm .002$ (0,05).

Current carrying capacity and contact resistance for loose piece sockets mated with various pin diameters are shown in the following table

Single Pole Socket Pin Diameter	Average Contact Resistance (mΩ)	@ rated Current For 1°C ΔT (A)	Max. Current For 30°C ΔT (A)
.020"(0,51mm)	1.5	1.4	11.0
.025"(0,64mm)	1.2	1.7	14.2
.030"(0,76mm)	1.1	2.1	17.0
.040"(1,02mm)	1.0	3.0	23.0
.050"(1,27mm)	1.0	3.0	27.0
.062"(1,57mm)	0.56	3.5	30.0
.080"(2,03mm)	0.35	4.0	32.0

INSERTION / WITHDRAWAL FORCE DISTRIBUTION CURVES

- A : .080 (2,03) pin/.080 (2,03) socket
 B : .062 (1,57) pin/.060 (1,52) socket
 B' : .059 (1,50) pin/.060 (1,52) socket
 C : .040 (1,02) pin/.040 (1,02) socket
 D : .020 (0,51) pin/.020 (0,51) socket

Special requirements, for which there are no standard Cambion connectors, can be met with custom-designed pins and loose piece sockets.

Electro-Mechanical Custom Design

Cambion are able to assist with Electro-Mechanical component design, either hybrid versions of standard products or to an application specific requirement, supported with fast turnaround of prototypes via its UK manufacturing activity. Additionally Cambion can offer full project management of connector and cable harness developments.

	Also available with black Polyolefin Sleeve as 461-3102-01-XX-10										

460-3050 / 461-3102

Recommended hook-up wire size -
.039 (0.99) Max. Diameter over Insulation

28AWG, 7 strands # 36 AWG copper wire plastic insulated

460-3308 / 460-3368 / 460-3369

Recommended hook-up wire size -
.053 (1.37) Max. Diameter over Insulation
Socket also accommodates

22AWG, 7 strands # 30 AWG copper wire PTFE insulated

20 AWG, 7 strands # 28 AWG copper wire insulated
24 AWG, 7 strands # 32 AWG copper wire insulated

460-3299

Recommended hook-up wire size -
Socket also accommodates

20AWG, 7 strands # 28 AWG copper wire PTFE insulated
18 AWG, 7 strands # 26 AWG copper wire, insulated
16 AWG, 19 strands # 29 AWG copper wire, insulated

Recommended Crimp Pliers

460-3308-01	Crimp tool Kit	435-5680-01-00-00
460-3368-01	comprises of the following	
460-3369-XX	Frame	430-5681-01-00-00
460-3299-XX	Turret head	430-5682-01-00-00

RF Connectors

Cambion compliments its vast range of high performance connectors and inductive products, with RF Connectors. Specialising in the manufacture of custom variants of industry standards Cambion offers an unique development facility of precision turning and the prototyping of application specials. Styles include N type, 7/16, SMA, SMB, MCX and many more incorporating blind mates and quick termination, with minimal outlay.

Custom converters and adaptors are available theoretically between any standard range of RF Connectors.

Devices are RoHS compliant

Inductance at I_{rated} is a typical inductance value measured when the inductor is subjected to the rated current

Designed to match Zetex ZXCD series Class-D audio solutions

Temperature Range: -55°C to +100°C

Devices are RoHS compliant

555-5120 and 550-5620 series are an over moulded construction 550-5630 are covered with shrink sleeve

* All asterisked lines feature in the Engineers designer kit (10 off each part),
part number 555-5120-00-00-00 moulded surface mount
part number 550-5620-00-00-00 moulded through hole, axial
part number 550-5630-00-00-00 sleeved through hole, axial

Transformers and custom products

In addition to its standard range of inductive products, Cambion can offer a wide range of transformer types which would be engineered application specific, accommodating power rating from 0.2VA to over 500VA, in through hole, surface mount, open frame and potted styles. Typical application include, DC-DC Converters, AC-DC or DC-AC power supplies.

Transformers

Types – linear and switching

Core material – laminated steel, laminated nickel, iron powder and ferrite

Power rating – from 0.2VA to over 500VA

Styles – through hole and surface mount, open frame, potted, planar and traditional winding methods

Applications include – dc-dc converter, ac-dc or dc-ac power supplies, impedance matching

Toroids

Outside Diameter – 1.5mm to 175mm

Core material – strip steel, amorphous, iron powder and ferrite

Wire size – 0.05mm to over 3mm

Mounting – self-leaded, surface mount, open frame, potted

Applications include – dc-dc converters, common mode and differential mode filter, RF mixer, baluns, current sensors, audio systems

Air Coils

Types – with or without ferrite, Iron powder and steel cores

Diameter – 1mm to 40mm

Turns – up to 100

Wire size – 0.1mm to 5mm

Wire type – silver plated, tinned, enamel coated copper and aluminium

Applications include – power supplies, noise suppression, RF filters

Additionally Cambion are able to assist with inductive component development, either via a hybrid version of a standard product or to an application specific device requirement. Cambion offers fast turnaround of prototypes to low cost, high volumes via its UK manufacturing activity and Far Eastern associate group facilities.

Notes

Core material	Ferrite
Inductance	Measured at 100KHz, 30mV (reading taken at 25°C ±5°C)
Terminations	Gold over Nickel underplate and meet the requirements of J-STD-001 and IPC-A-610
Weight	1.0g (typical)
Operating temperature	-51°C to +85°C
Storage temperature	-51°C to +105°C
Resistance to soldering heat	Maximum of three 20 second reflows at +260°C, parts cooled to room temperature between cycles
Moisture Sensitivity Level (MAS)	1 (unlimited floor life at <35°C / 85% relative humidity)
Packaging	500pcs per 13" (330mm) reel. Anti-static 24mm carrier tape
PCB washing	Pure water or alcohol recommended – others to be evaluated by customer
Compliance	RoHS

Dimensions in inches (mm)

Core Material

-01 to -07 Carbonyl SF (Blue)
 -08 to -19 Carbonyl E (Red)
 -20 to -25 Carbonyl C (Yellow)

Temperature Range: -55°C to +105°C

For RoHS Compliant add suffix -LF to the part number
Windings are varnish impregnated and powdered iron
cores are moisture proofed
Recommended tuning tool 435-1522-01-00-00

Temperature Range: -55°C to +105°C

For RoHS Compliant add suffix -LF to the part number
Windings are varnish impregnated and powdered iron cores are moisture proofed
Recommended tuning tool 435-1522-01-00-00

	-31	330.00
	-33	470.00
	-35	680.00
	-37	1000.00
	-39	1500.00
	-41	2200.00

Dielectric Strength: A potential of 250% of rated voltage may be applied for 5 seconds at 25°C

Terminal strength: a force of 20 lbs. (9.1Kg) exerted in the direction of terminal exceeds the requirements of MIL-C-11015C

Insulation Resistance: >1GΩ @500V DC measured at 25°C

Working Voltage: 500V DC

Supplied with lock washer and hex nut unassembled

Suggested Mounting Torque: 4inch/lbs. (0.448Nm)

Devices are RoHS compliant

Temperature Coefficient: Maximum capacitance change from 25°C. Value over the temperature range: -40°C to +85°C is +22% -56%

SWAGING TOOL SELECTION

Where appropriate, the part numbers of recommended swaging tools are specified, and in many cases we offer a choice of Roll Punch or Flare Punch. Generally we recommend a flared swage where the component will be soldered to an etched pad on the swaged side of the board. Roll swaging is commonly used where the component is to be installed on a plain board.

The flared swage is mechanically weak prior to soldering; but after soldering, the solder fillet provides a reliable electrical and mechanical connection. The flare swage is not intended to make the swaged component more than finger tight prior to soldering.

By comparison, the rolled swage is much stronger; however, a void may be formed underneath the swaged collar where flux could be entrapped or air may be present which could cause blowholes if soldered.

Cambion® is a registered trade mark

Tool installation instructions - Stage Instruction

- Loosen screws (15) in anvil plate (3)
- Install anvil (12) in anvil plate (3)
- Remove domed hex nuts (were thumb nuts) (7), cam shaft (5) and handle assembly (2)
- Install retaining ring (19) on punch (11)
- Install punch, inserting through compression spring (10)
- Reassemble handle assembly (2), cam shaft (5) and domed hex nut (were thumb nuts) (7)
- Bring handle forward so that punch (11) touches anvil (12)
- Line up punch and anvil by moving anvil plate (3)
- Lock anvil plate in place by tightening screws (15)
- Adjust anvil height by screwing into anvil plate, so that the clearance between punch and anvil, with handle all the way forward, is slightly less than the thickness of the board to be swaged
- Lock anvil in place by tightening set screw (14)
- Properly locate board support rods (4), (if needed) to fit board to be swaged
- Adjust thumb screws (8) so that the board will be level, and lock in place with thumb nuts (13)

SWAGING EXAMPLES

ITEM	DESCRIPTION	DIAGNOSIS OR CAUSE
1	Good Roll Swage	-----
2	Good Flare Swage	-----
3	Flare Swage	Split, due to excessive pressure and wrong tooling
4	Roll Swage	Damaged swage end due to misalignment of anvil and terminal with punch
5	Flare Swage	Insufficient swage due to improper anvil height adjustment
6	Flare Swage	Terminal swollen due to slightly excessive swaging pressure and anvil height adjustment
7	Bent Terminal	Bent terminal due to lifting board from anvil at an angle
8	Bowed Terminal Board	Board bowed during swaging due to undersized mounting holes in board
9	Damaged Board	Board damaged during swaging due to undersize terminal mounting holes and/or improper swaging tools

MOUNTING PROCEDURE (unless otherwise noted)

- Step 1. Drill through-hole and countersink panel according to panel thickness, Figure 2 & 3, see table above.
- Step 2. Using an arbor type tool in a suitable press.
- Step 3. Press part into centre of panel mounting hole until shoulder of Teflon insulator is fully seated against panel, Figure 4. Raise tool and the job is complete.

Due to pin length these tools cannot be used in the manual swager - 435-3803

CAGE CODE

Cambion Electronics Limited's cage code is K3105

MEMBER ASSOCIATIONS

The Interconnect Technology Suppliers Association (ITSA) was originally formed in 2008 as the British Connector Manufacturers Association (BCMA) and was re-launched in 2017 to more accurately reflect its members activities and to enhance its profile in the UK.

ITSA is the only UK association representing companies who operate in the interconnection technology arena, it exists to provide a favorable operating environment for the benefit of interconnect technology companies and to provide a dynamic network for exploring and co-operating on mutually beneficial opportunities.

Regular meetings include:-

- Networking
- Collaboration
- Market Reviews
- Quarterly Statistical Data
- Guest Speakers

REACH

Registration, Evaluation, Authorisation and Restriction of Chemicals (REACH) Statement

Cambion Electronics Limited has studied the above regulations and at the time of print do not import or manufacture any chemical or articles above 1 (one) tonne from outside the EU. As a result, Cambion Electronics Limited are classified as a DOWNSTREAM USER, which under the current directive only requires adherence to use purchased materials per manufacturers instructions. Currently Cambion Electronics Limited do not supply any chemicals or services direct to any customers or sub-contractors, consequently have not registered any of the product contained in this catalogue.

Cambion Electronics Limited will take all necessary steps to ensure continuation of material supplies (e.g. lubricants, machine coolants, cleaning materials etc.) and services used in processes to manufacture the products contained in this catalogue.

Information correct at time of publication, for the latest update please visit our website or contact the office.

WEEE

Waste Electrical and Electronic Equipment (WEEE) Compliance

Cambion Electronics Limited has reviewed this directive and do not come under the provisions of the Directive.

Cambion Electronics Limited produces electrical/electronic components, and does not manufacture electrical and electronic equipment in the sense of the directive.

Cambion Electronics Limited products are in the category of "items which are not finished products". They are sold to other producers for further processing to form a finished electrical product.

Information correct at time of publication, for the latest update please visit our website or contact the office.

RoHS

Restriction of Hazardous Substances (RoHS) Statement

Cambion Electronics Limited is committed to offering products that comply with the latest EU directives, however it is recognised that not all applications through exemptions require 'Lead Free' products, consequently Cambion Electronics Limited will endeavour to offer both RoHS and non RoHS products applicable to customer requirements. Products are clearly defined in the catalogue pages with their RoHS status, thus giving the customer a greater flexibility with product selection. RoHS compliant certificates are available from our web www.cambion.com Please contact our Engineering department with any specific issues.

Information correct at time of publication, for the latest update please visit our website or contact the office.

Conflict Minerals Compliance

Conflict Minerals Compliance

The United States Congress passed legislation in July of 2010 requiring corporations to report the use of "Conflict Minerals" in the manufacture of their products. The current law, generally referred to as the "Conflict Minerals Law", was included as Section 1502 of the Dodd-Frank Wall Street Reform and Consumer Protection Act, passed by the US Senate on May 20, 2010 and signed by President Obama on July 21, 2010.

"Conflict Minerals" in this context refers to specific minerals originating from mines controlled by armed groups in the Democratic Republic of the Congo or adjoining countries.

To the best of our knowledge Cambion Electronics Limited is in full compliance with this legislation. We have received statements from suppliers who ensure us they are not sourcing raw materials from these restricted countries.

Information correct at time of publication, for the latest update please visit our website or contact the office for more information
